

Surface Cleaning, Disinfection & Preparation Made Easy

KIMTECH* Wipers for the WETTASK* System

KIMTECH*
BRAND

The compact, convenient, wet wiping system that's safe, simple and reliable

KIMTECH* Wipers for the WETTASK* System are specifically designed for surface cleaning and preparation, where maintaining the integrity of your chemical solution, controlling costs, and improving workplace safety are paramount. It is an ideal alternative to using a spray bottle or open bucket in combination with a cloth.

Typical uses

- Surface preparation
- Surface cleaning and sanitising
- Cleaning and removing soil, oil, grease
- Solvent application
- Healthcare Disinfection
- Food Service cleaning

Safe

- Enclosed system helps avoid cross contamination of the wipers and cleaning solution by eliminating re-dipping, which can happen when using open bucket systems
- Sealed lid helps to reduce staff exposure to chemical fumes and spills

Easy to use

- Versatility of adding your preferred disinfecting solution, allowing you to maintain control over the chemicals you use
- Reduces the need to regularly mix solutions for an open bucket system, and therefore reduces chemical usage and waste
- Portability that makes it easy to take the chemical to the desired point of use
- Re-usable bucket / canister helps reduce plastic waste into the environment
- No laundering required

How to use the WETTASK* System

1

Insert a dry KIMTECH* Wiper roll into the bucket or canister. Fill out the side label with all required information.

2

Mix your preferred solution for surface cleaning, and slowly pour the chemical over the top of the roll.*

3

Thread the centre wiper through the lid and snap shut.

Optimum Application

Your choice of wiping material can dramatically affect the amount of active agent that actually reaches the surfaces being cleaned.¹

- The wiper material found in 06001 is suitable for most common industrial solvents, detergents and water-based cleaners.²
- Enclosed system prolongs the integrity of cleaning solutions to near target levels over longer periods of use

Solvents & Volatile Chemicals

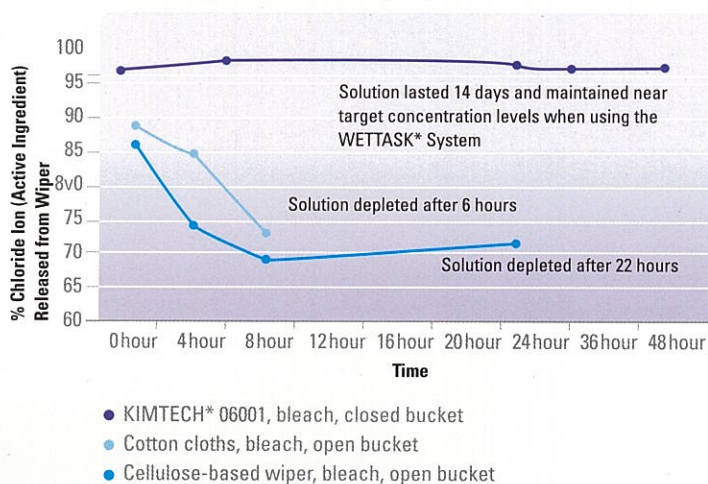

Most solvents are "volatile", i.e. they evaporate into the air very quickly. WETTASK* System slows down the evaporation process – prolonging the life of the chemical & maintaining the amount of active ingredients reaching the surface to near the original concentration level.

Both open bucket and spray bottle systems release more fumes and particulates into the air which can cause workplace safety issues due to chemical absorption through inhalation.

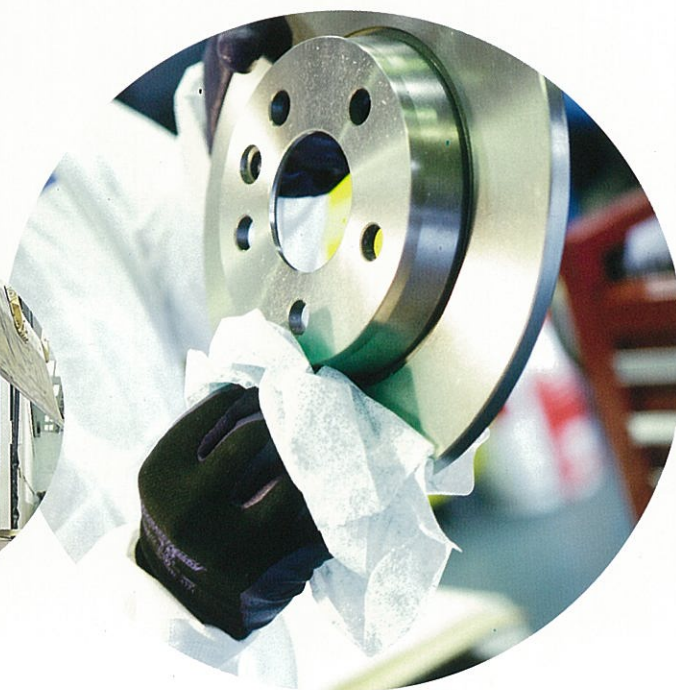

The enclosed WETTASK* System reduces inhalation risks associated with surface cleaning and preparation, allowing you to maintain control of your specific and changing chemical needs versus pre-saturated wipers, and reduces chemical waste versus open bucket or spray bottle systems, improving cost-in use.

Research demonstrates that KIMTECH* Wipers for the WETTASK* System are more effective at applying the correct concentration of active chemicals to surfaces than using an open bucket system.

Comparison of closed and open wiper systems in maintaining solution Integrity

Changes in pH and exposure to air and light can affect the stability of bleach. The WETTASK* System provides an enclosed environment for the bleach and the KIMTECH* wiper, with little exposure to air and light.

¹ When choosing material to use with solvents, the HYDROKNIT* material (06001) is more absorbent.
² The product should not be used with trichloroethane or trichloroethylene.

RECOMMENDED WIPERS FOR: SOLVENTS, DETERGENTS, & WATER-BASED CLEANERS

Description	SAP Code	Code No.	Material	Case Contents	Sheet Size (w x l) / refill size	Dispenser
KIMTECH* Wipers for Solvents	10008246	06001	HYDROKNIT*	6  x 60 	305 mm x 318 mm	 Small bucket and lid free with case

The KIMTECH* wiper material found in 06001 is suitable for most common industrial solvents, detergents and water-based cleaners.
